

Chapter 2, Episode 3: Operable barriers

Operable

Can someone operate this in multiple ways? Is each way easy?

Why “keyboard-only?”

Some things work for screen readers but not for keyboard-only users!

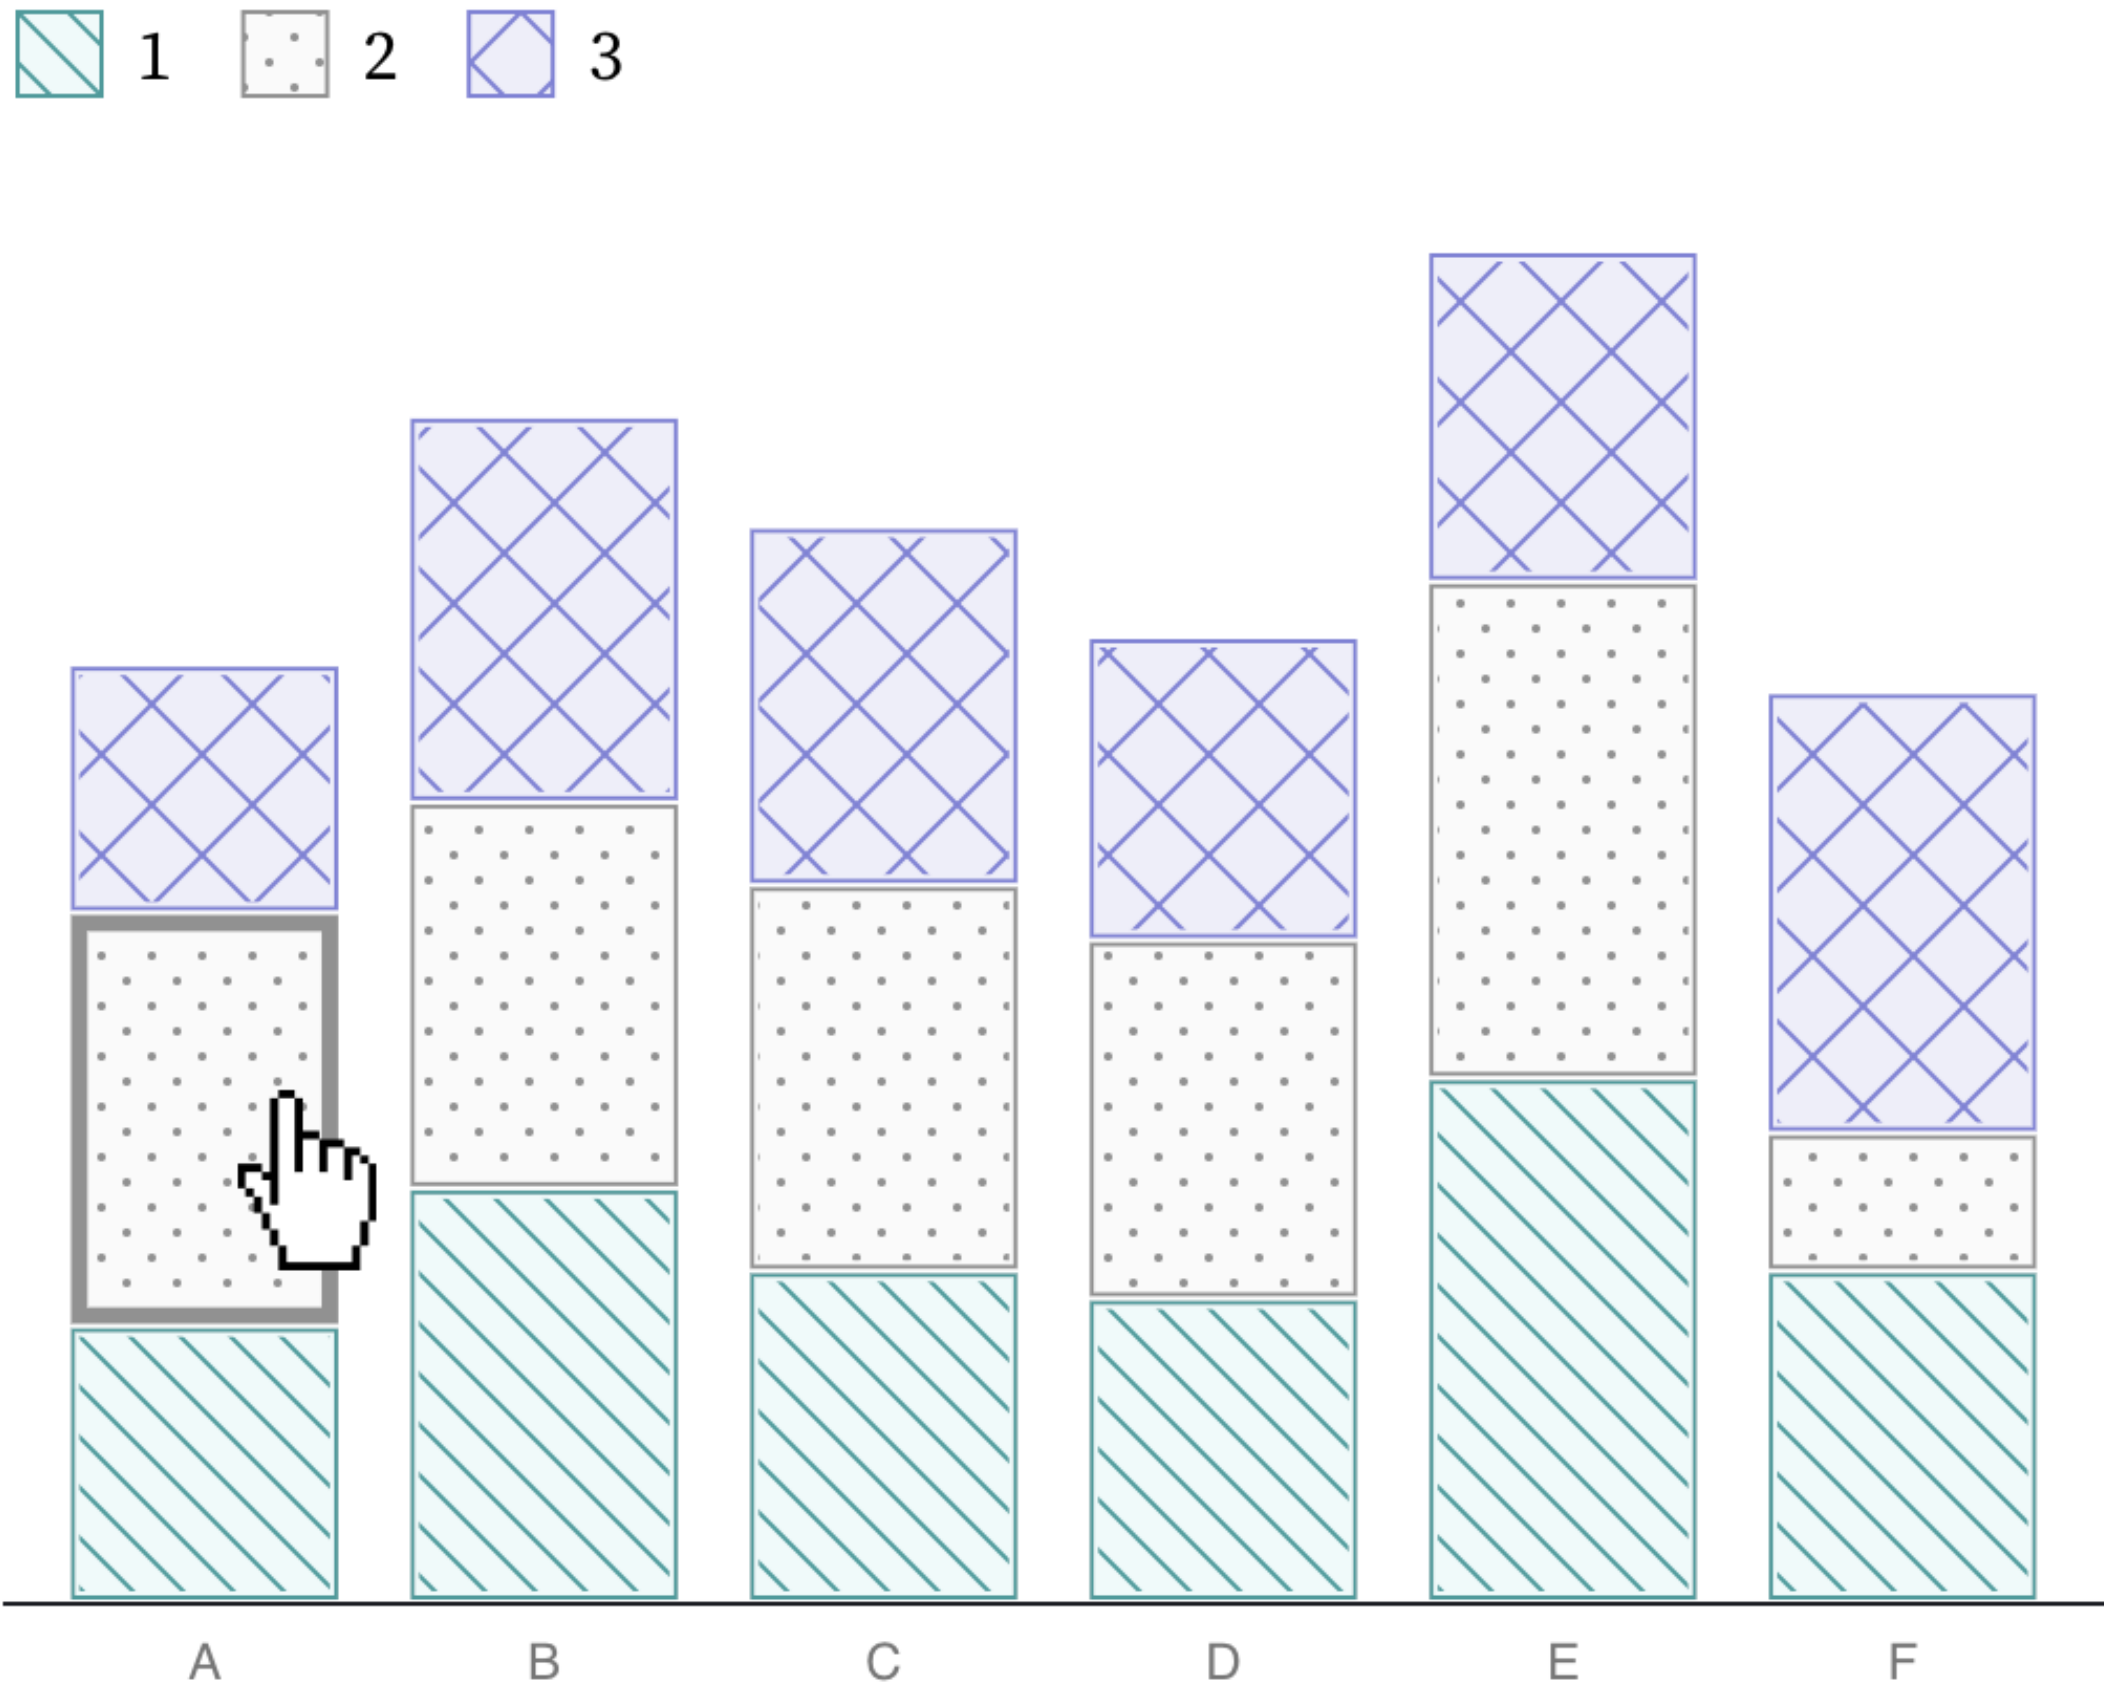

Scatterplot with External Links and Tooltips

A scatterplot showing horsepower and miles per gallons that opens a Google search for the car that you click on.

https://vega.github.io/vega-lite/examples/point_href.html

Ensure keyboard access (if interactive)

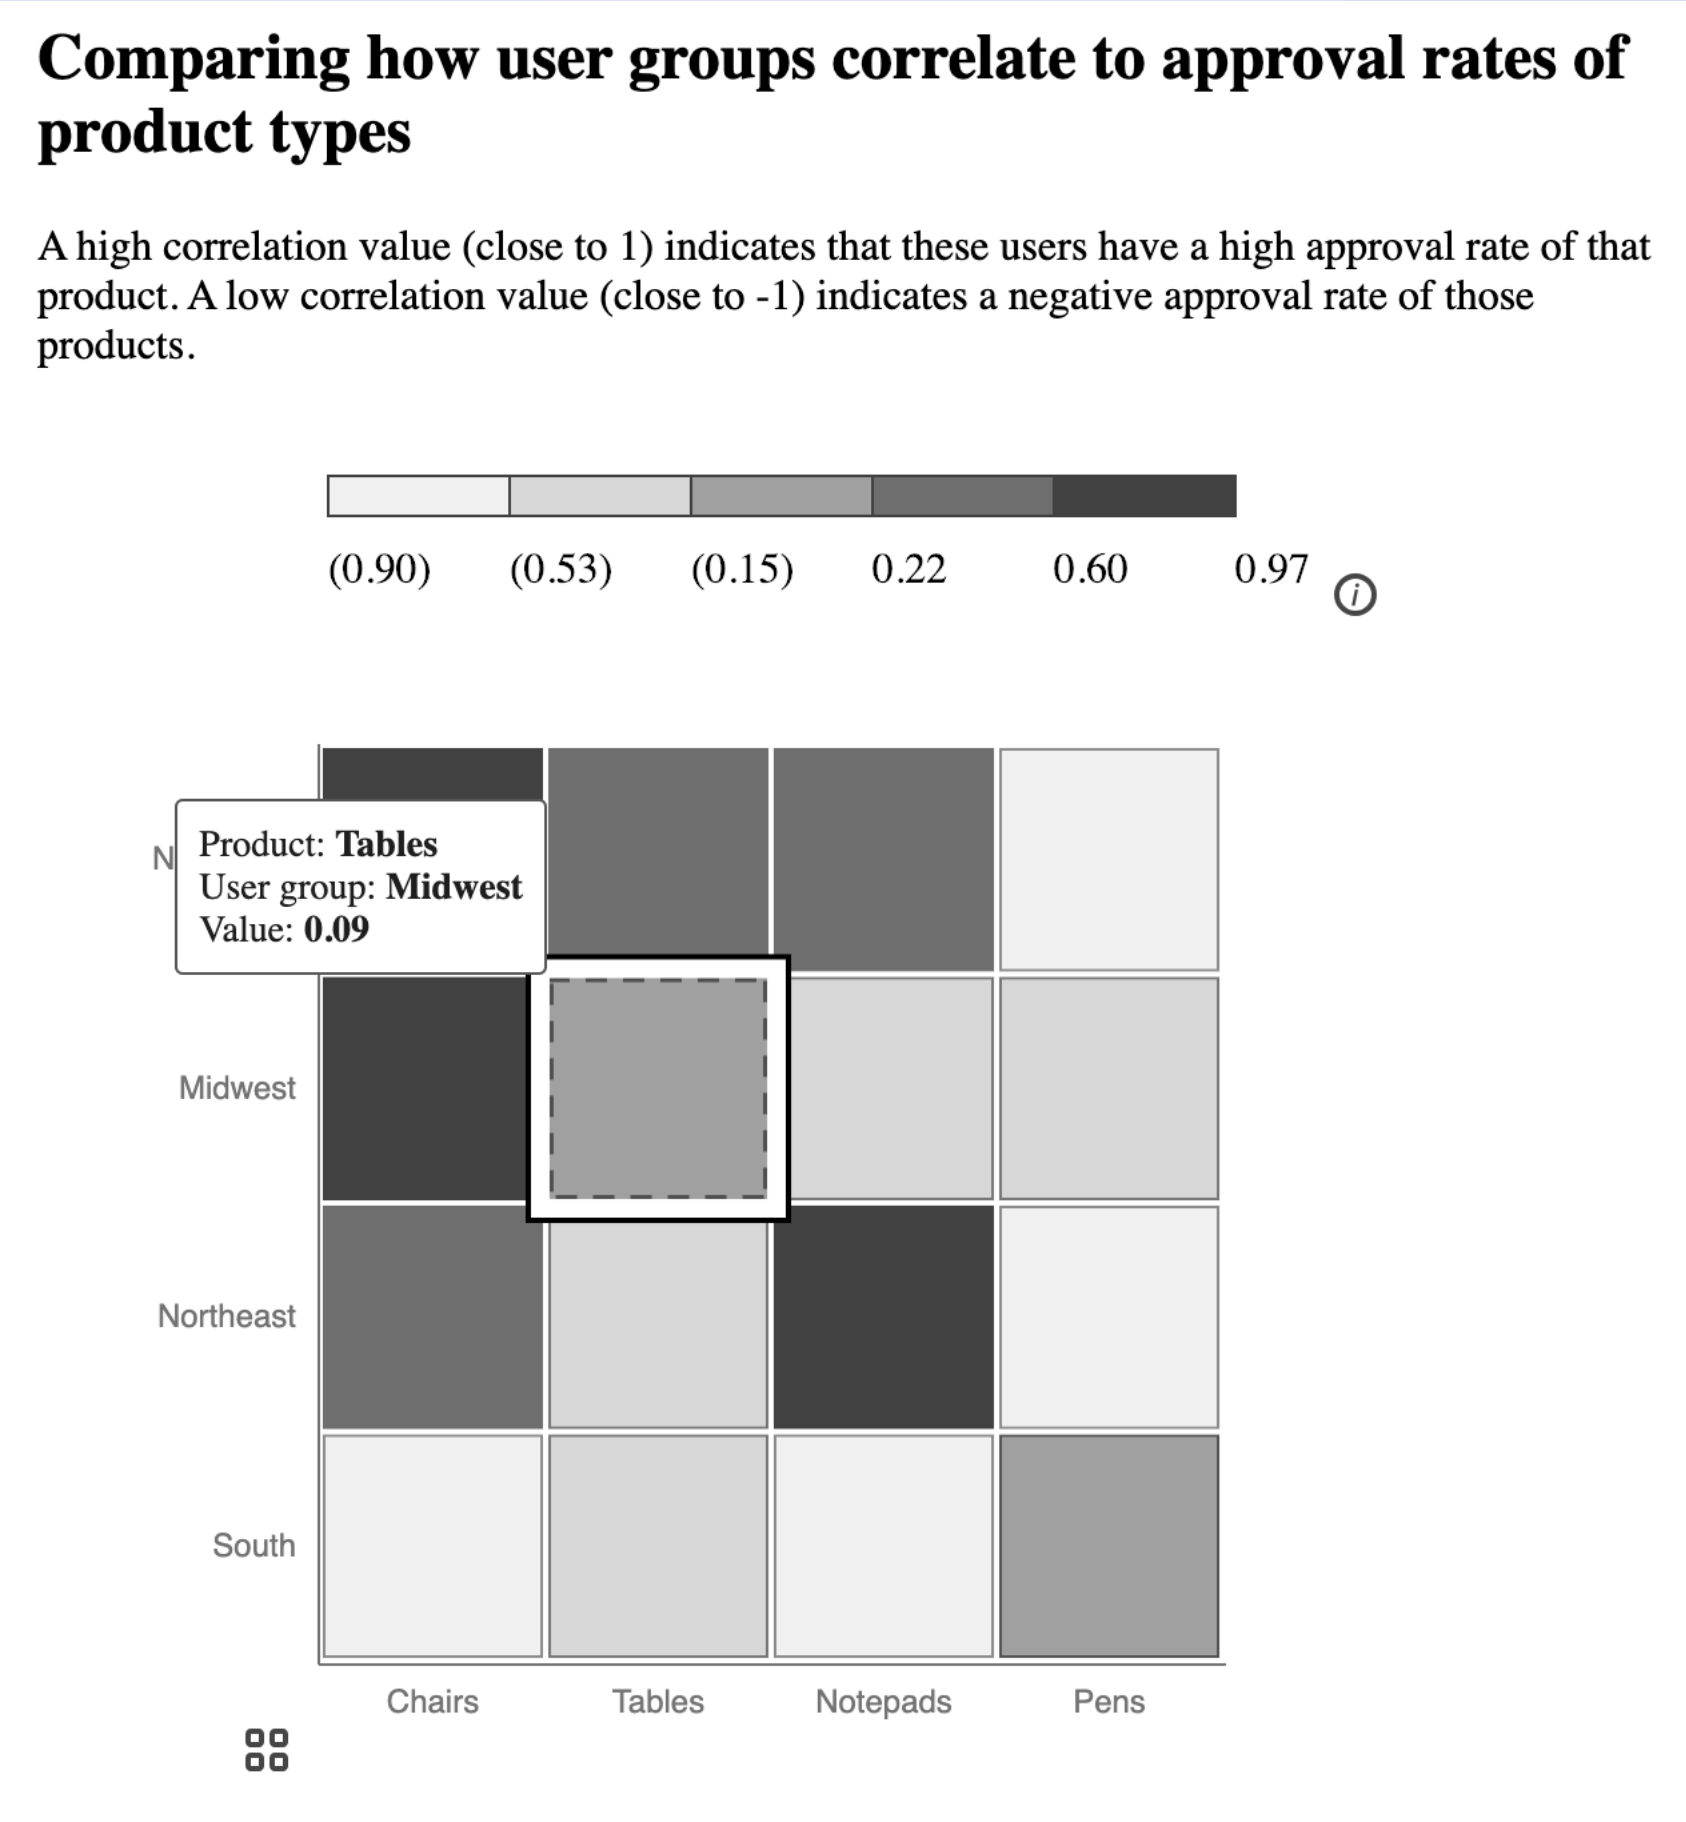

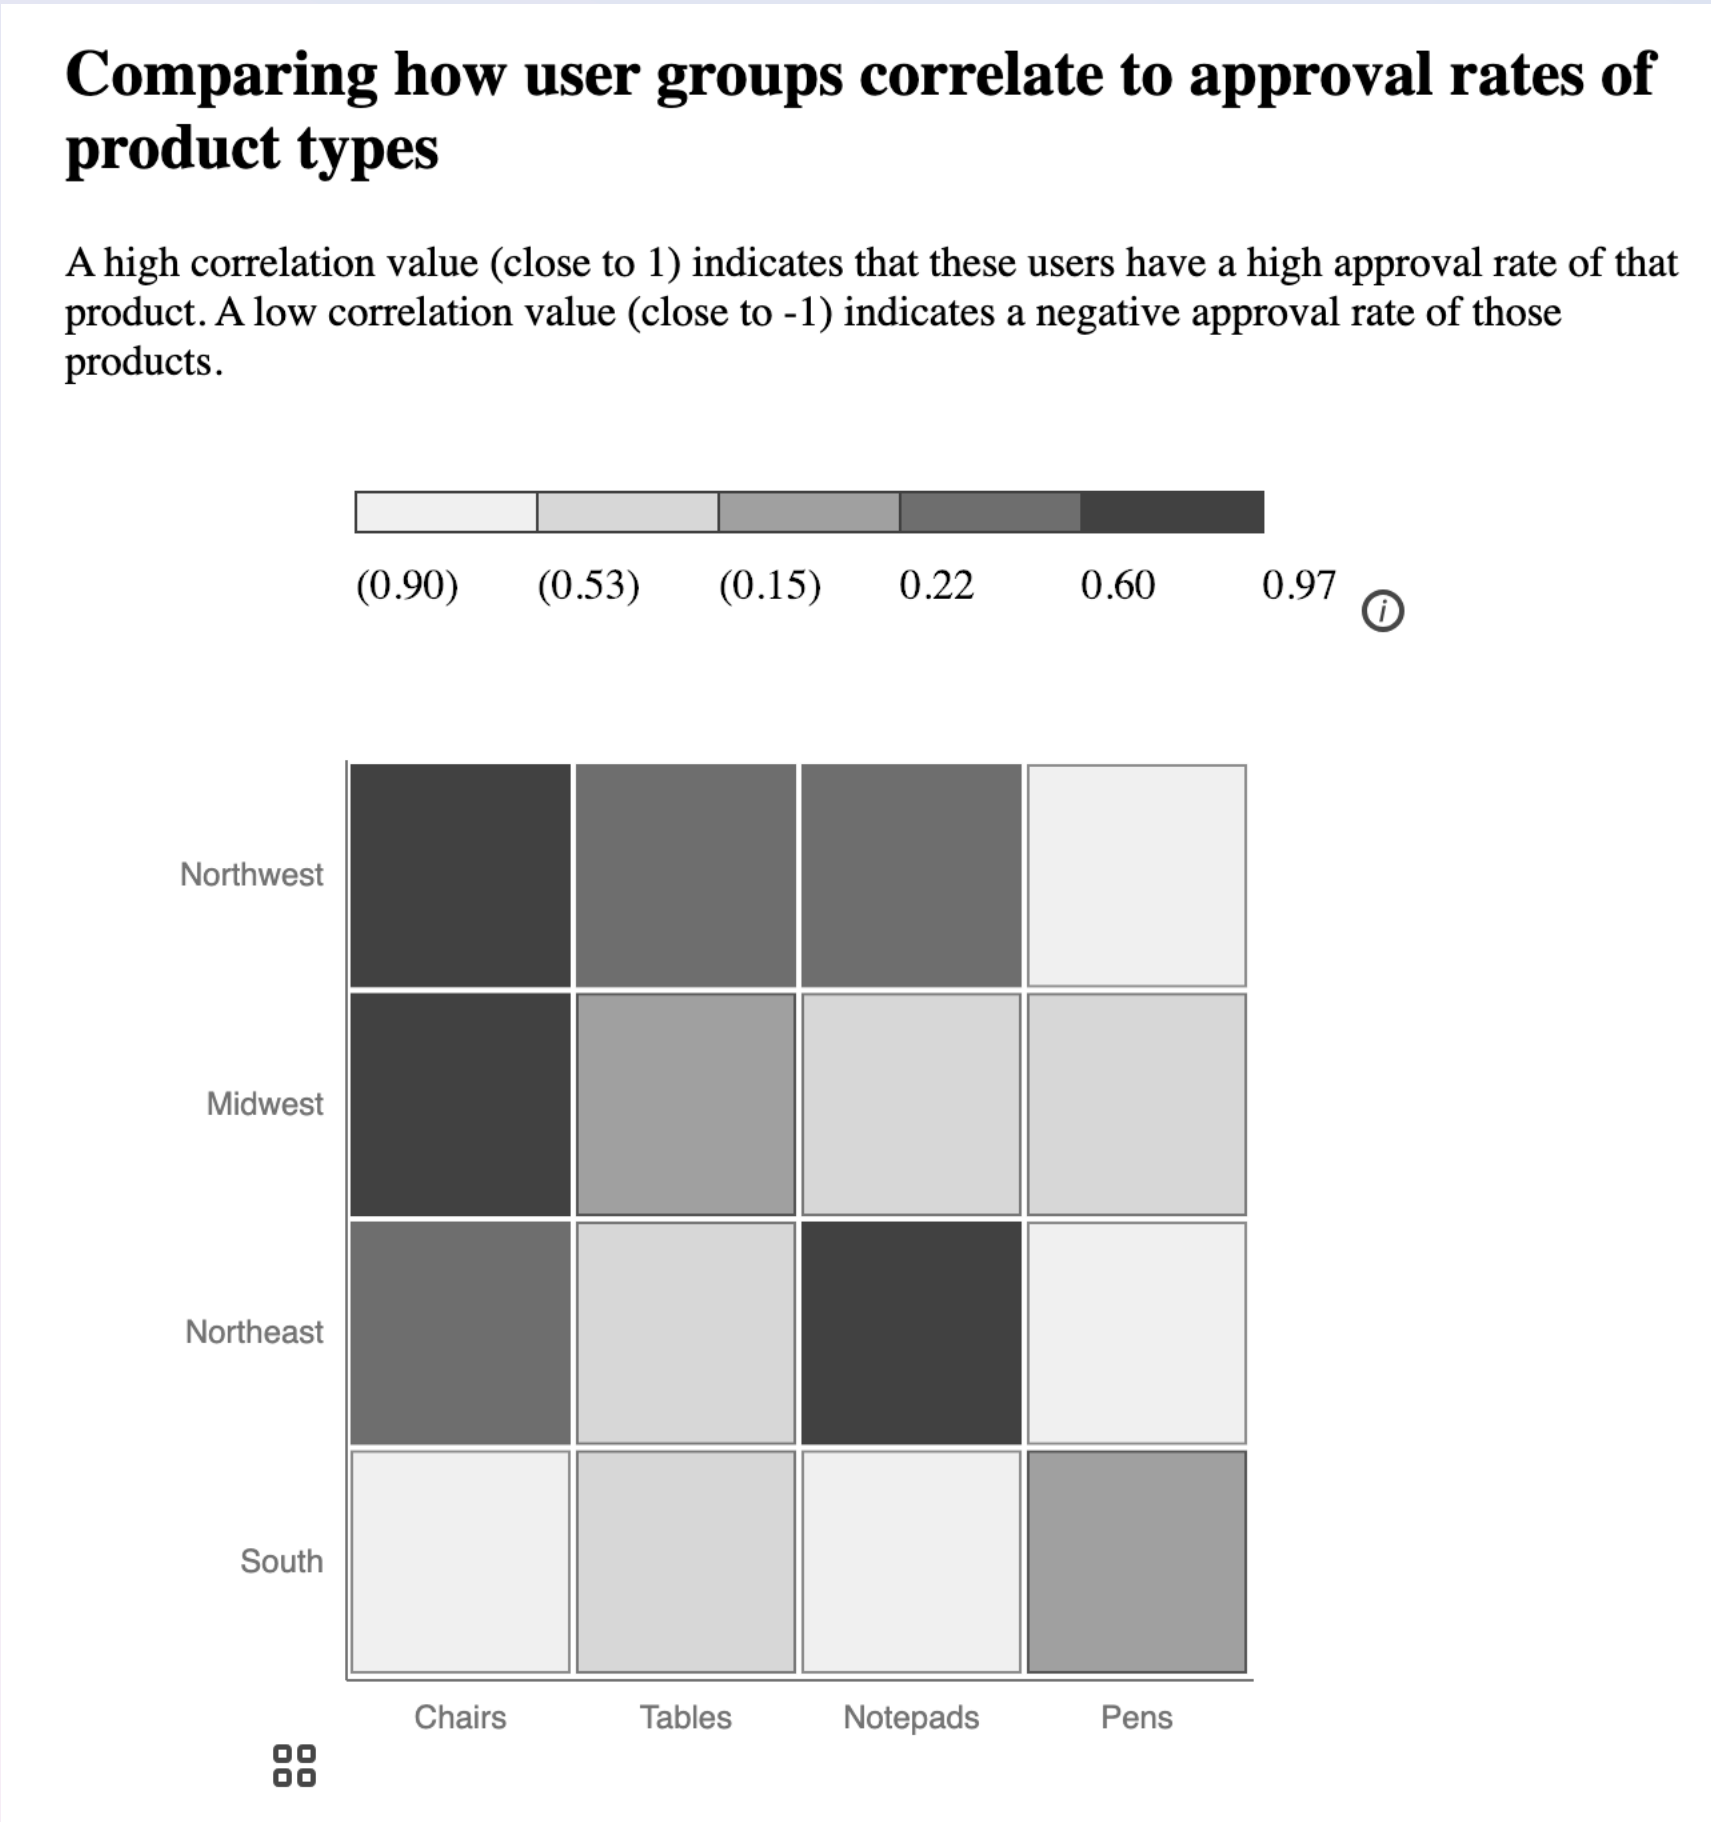

Status: Category 2 of Building A has been selected.

Products In Building A that belong to Category 2*

Product Name	Count in Stock
Product A	147
Product C	88
Product M	69

**This table has been populated by the selection in the preceding chart.*

Provide feedback (visually and non-visually)

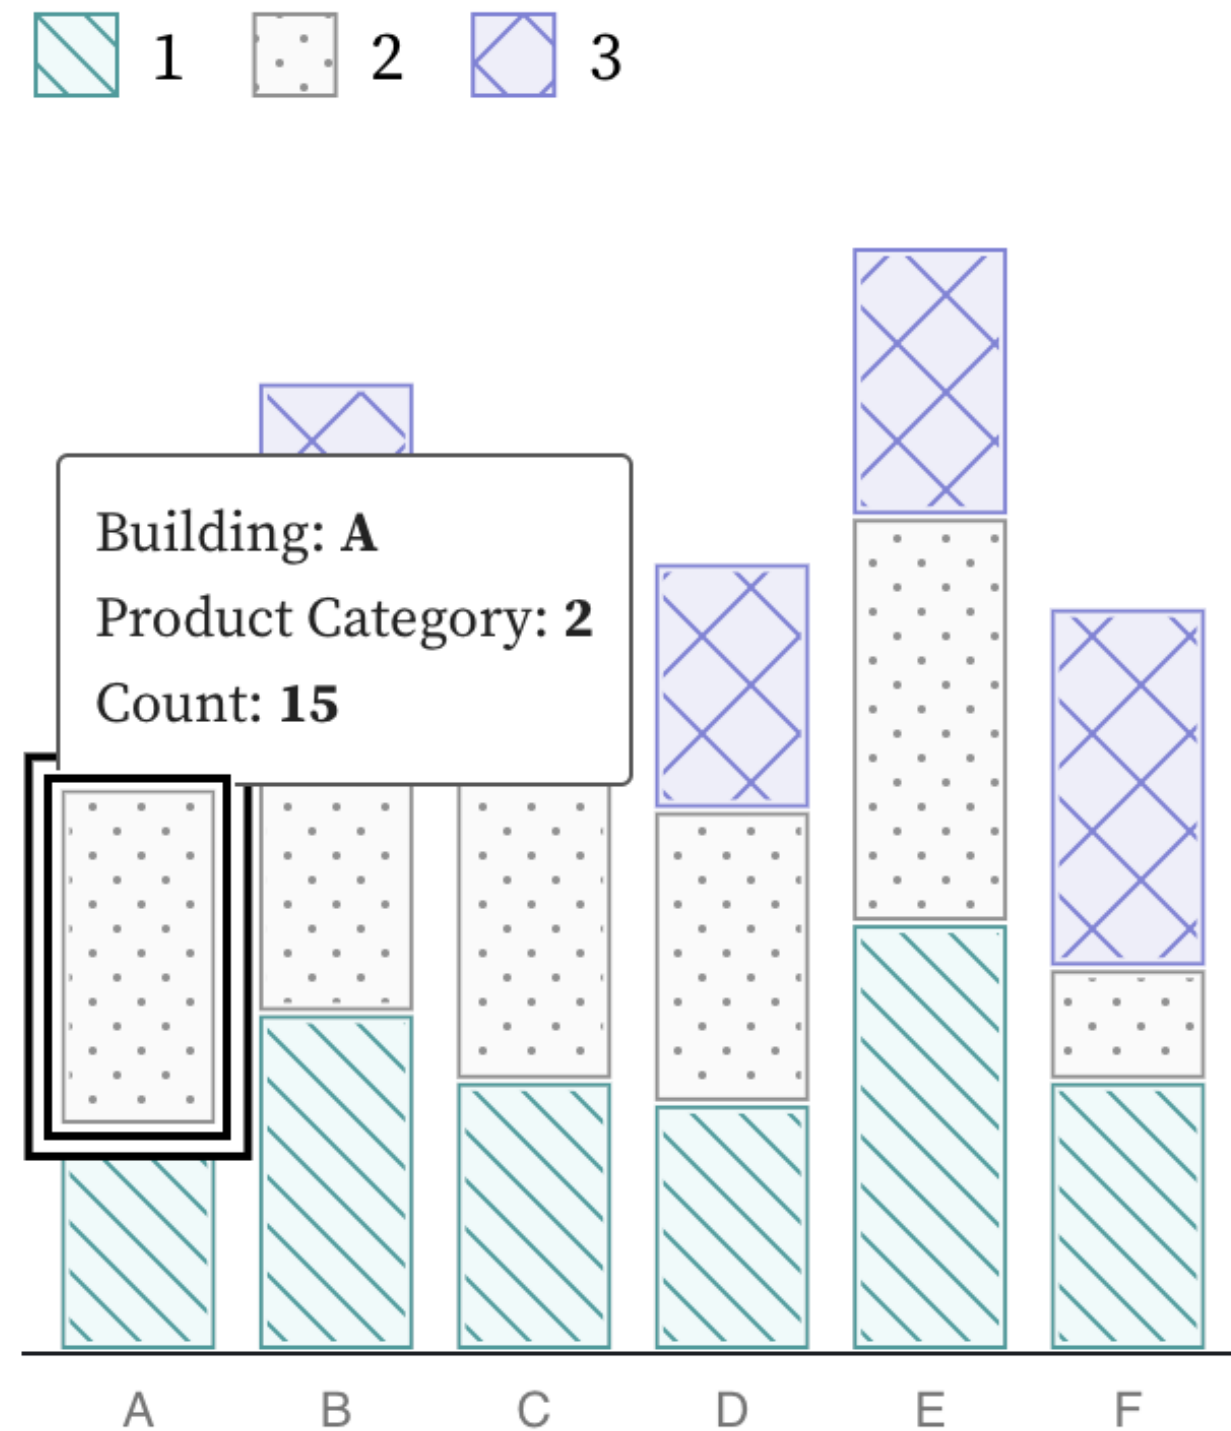

Alt text should communicate operability

1 2 3

× Building A. Product Category 2.
Count 15. Bar 2 of 3. Image.

Semantics matter

× Building A. Product Category 2.
Count 15. Bar 2 of 3. Image.

“Image” doesn’t signal
interactivity!

“Aria” states and roles are standardized

1 2 3

1 2 3

1 2 3

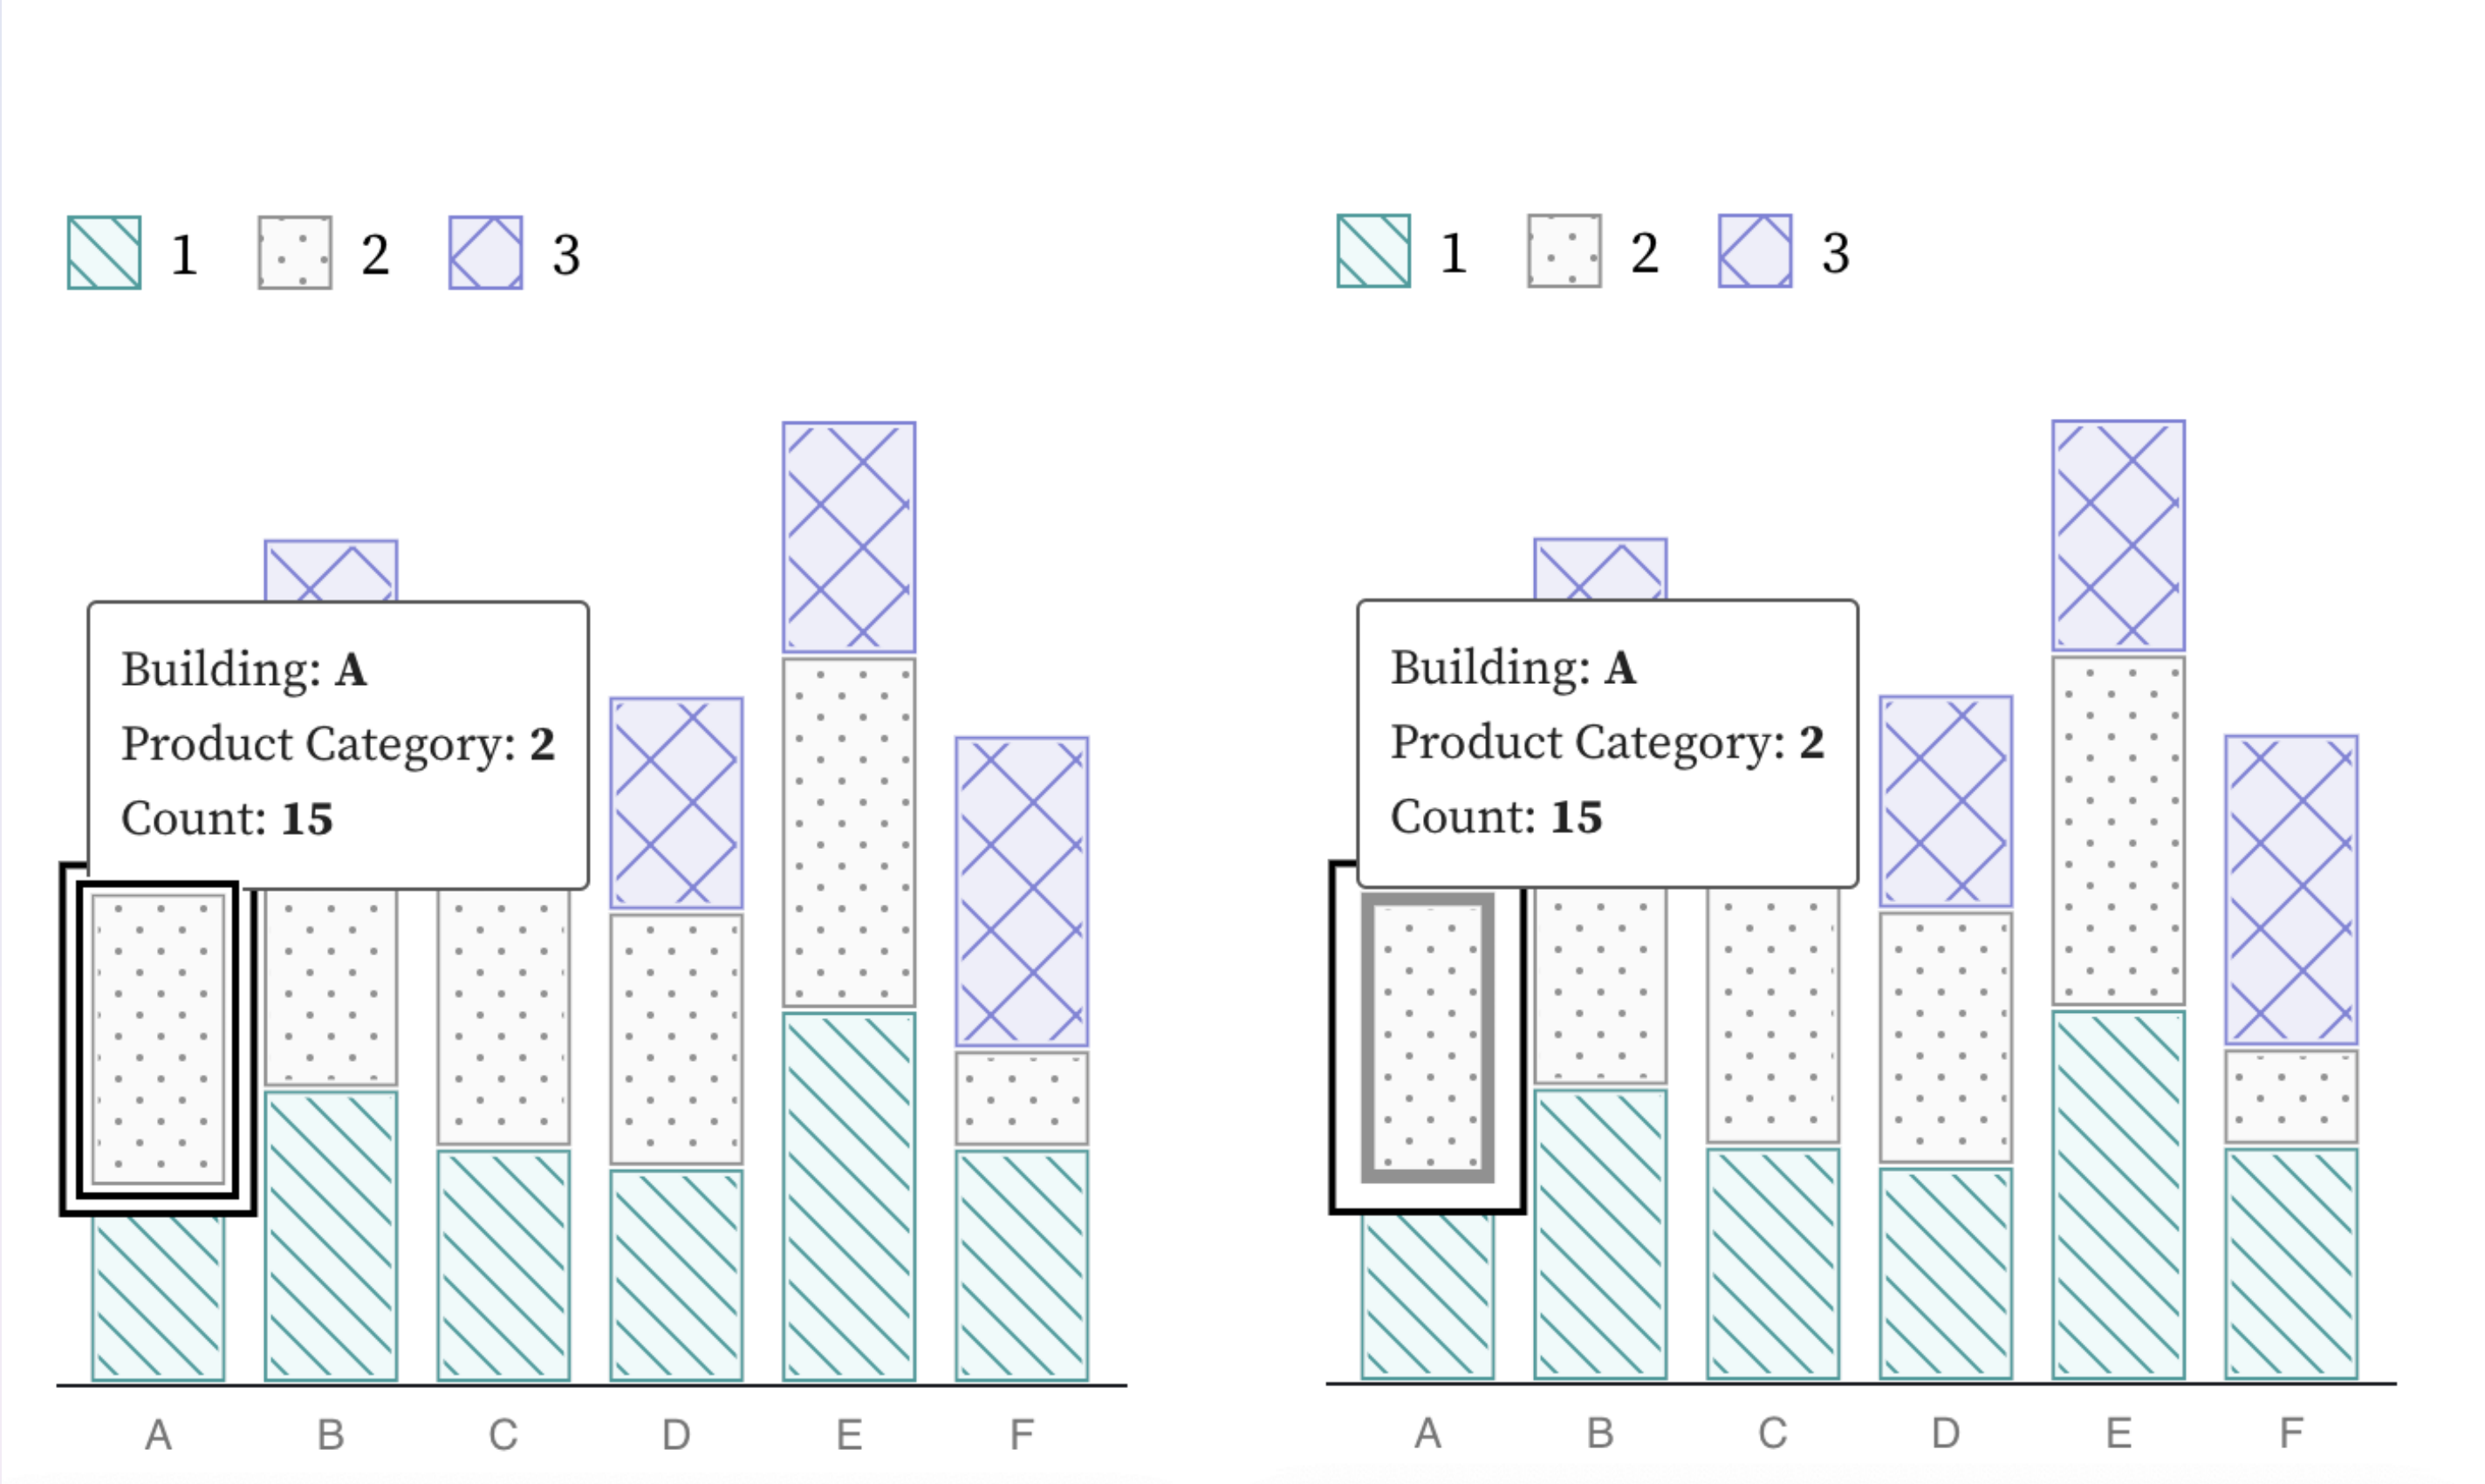

× Building A. Product Category 2.
Count 15. Bar 2 of 3. Image.

× Building A. Product Category
2. Count 15. Bar 2 of 3., toggle
button

× selected, Building A. Product
Category 2. Count 15. Bar 2 of
3., toggle button

Communicating operability should be visual too

Hovered/focused

Selected

Design your own interaction styling

Expecting users to hover on something tiny is an accessibility design failure

Operable Evaluation Toolkit:

1. **Use your mouse:** can it do something meaningful? (tooltip, click event, etc) If so:
 - A. Test using a **keyboard-only**: can you navigate *and* use keyboard activation (spacebar/enter) on the visualization?
 - B. Test using a **screen reader**: Can you use a screen reader to navigate and use keyboard activation on the visualization?
2. **Check sizes:** can a mouse *easily* interact with this?
